SKS TECHNOLOGIES ADELAIDE OFFICE FITOUT

Visually beautiful, audially challenged

**SUMMARY**

The SKS team in Adelaide recently transitioned into a larger office space at Mile End, which was a much needed upgrade. However, the new executive boardroom and smaller meeting rooms were plagued with poor acoustic properties, making them far from ideal for conferencing.

PROJECT REQUIREMENTS

A visually appealing space often comes with the trade-off of poor acoustics, and the executive boardroom at SKS's new premises was no exception. The room featured a glass wall spanning one side, multiple windows, and a large boardroom table, all of which contributed to significant acoustic challenges. Additionally, three smaller meeting rooms, designated as 'live' conferencing spaces, also required acoustic treatment. Recognising the need for professional expertise, Steven Falcinella from SKS enlisted the help of Brenton Eckersley, Account Manager for South Australia and the Northern Territory at Amber Technology, to address these issues.

THE SOLUTION - THE BOARDROOM

To tackle the acoustic challenges in the boardroom, Primacoustic's Hexus 36 Ceiling Clouds were identified as a key solution. These hexagonal-shaped ceiling tiles are not only highly effective in absorbing sound but also add a touch of style to the room. Two Hexus kits were ordered and installed, significantly improving the room's acoustics.

To further enhance the audio environment, the available wall spaces were fitted with Broadway B4848-SQ2 Square-Edged panels in a grey finish. These panels not only complemented the room's aesthetics but also played a crucial role in dampening the problematic audio reflections.

THE SOLUTION - MEETING ROOMS

For the smaller meeting rooms, Primacoustic's Clarity Kits provided a simple yet elegant solution. Steve selected the Arctic White kits for each room, which seamlessly blended with the existing decor. To further enhance the acoustic treatment, a few leftover Broadway panels in grey were added, effectively resolving the acoustic issues in these spaces.

INSTALLATION

The installation of these acoustic solutions was expertly carried out, resulting in a significant improvement in the audio quality of both the executive boardroom and the smaller meeting rooms, ensuring that SKS's new office is now equipped for clear and effective conferencing.
